A Program by

Make it Click: A Car Safety Program for Tweens

The Make it Click Initiative is an empirically-supported school-based program targeting increased safety belt/booster use and back-seat use among 8- to 12-year- old children (tweens). Motor vehicle crashes are a leading cause of death for children. Less than half of tweens involved in crashes wear seatbelts, and 3 out of 4 sit in the front seat when they are the sole passengers. Funded by the Virginia Highway Safety Office and led by Dr. Kelli England of Eastern Virginia Medical School, the program's design includes involvement of teachers, school staff, and after school organizations to implement components in ways that do not infringe upon academic time. This program includes:

- a) competition among classes to achieve a high rate of students buckled in the back;
- b) a creativity contest with entries illustrating a car safety theme;
- c) a series of parent education flyers;
- d) safety-themed assignments that support state standards of learning objectives;
- e) safety-themed plays and activities and
- f) educational presentations.

Evaluation results indicate the program leads to significant improvements in safety behaviors, particularly regarding observed safety belt use. Tweens in the intervention schools were 3 times more likely to wear their safety belts at follow-up than tweens in the control schools.

Toolkit Content

Each component of the toolkit was originally designed to be implemented on a rolling basis (1-2 per month) over the course of a school year. However, the program may be adapted to suit your needs.

Section I

Belted in the Back Seat Challenge

This is an exciting competition in which groups compete to achieve the highest rate of children buckled up and sitting in the back seat. Children help promote the program and collect the data. Materials include detailed instructions for the challenge, a flyer, and a datasheet used for safety belt observations.

Belted in the Back Seat Challenge Instructions

The “Belted in the Back Seat Challenge” is an intervention where grades compete to achieve the highest rate of students using safety belts/boosters and sitting in the back seat (during parking lot observations). The intervention has two main parts: promotion and observation.

Example Intervention: Third grade competed with 4th grade and 5th grade competed with 6th grade. Each class in the winning grade received a trophy, certificate, and class picture in a frame. All students received a Make-it-Click wristband. While prizes are not required, they increase student buy-in.

Promotion (typically 1 week)

1. You (or someone else in your school community) will speak to the 3rd-6th grade teachers and students during convenient academic times for a maximum of 5 minutes to describe and promote the Belted in the Back Challenge and to get the children excited about the contest. Be sure to highlight the competition aspect, as kids really enjoy competing against their schoolmates.
2. Highlight the 3 things they must do in order to win: 1) wear their safety belt/use their booster seat, 2) sit in the back, and 3) tell their classmates to do the same.
3. You (or someone else in your school community) will select 3-4 children to hold signs (have the children make posters for promotion) during bus pick-up time. Posters can have “Please Buckle Up. I Care” on one side and “Thank you for buckling up” on the other side. The signs should be visible to children exiting the school, and serve as another way of promoting the Belted in the Back Seat Challenge.

Observation (typically 2 days)

1. You should identify one or two student walkers from each grade (3rd-6th) who can arrive to school early to help conduct safety belt/booster use and back seat observations of their own grade during drop off times.
2. Pair each student with an adult observer who collects the data on the Buckle Challenge Datasheet (use a different sheet for each grade). Involving students in data collection is essential for increasing peer-to-peer buckle-up conversations and student excitement about the program, as well as to help you identify which grade each student being dropped off is in (necessary to allow for competition among grades).
3. Since the data collection occurs before school starts, students who are serving as data collectors may miss a maximum of 5 minutes of class time in the mornings.
4. After the data have been collected by the students, you should tally the results. Provide the winning grades with prizes, if you desire. Make a flyer of the results, and then provide the flyer to all 3rd-6th grade teachers to share with their students. The results can also be incorporated into morning/afternoon school announcements or shared in the school's parent newsletter.

Help your grade win the...

Belted in the Back Challenge

1

Wear your safety belt/use your booster seat

2

Sit in the back seat

3

Tell your friends to do the same

Section II

Buckie Buckle Play

This is a fun activity that can involve a large group of tweens. The play increases children's knowledge and use of seatbelts and raises awareness of car safety issues among the audience. The play can be performed during class time or as an after-school event. Materials include a script, a costume checklist, and logistical information for performing the play.

Buckie Buckle Play: *Important Information*

What is the Buckie Buckle play?

Buckie Buckle is a play about car safety. It focuses on the main character, Buckie Buckle, and his encounters with various family members who do not want to wear their safety belts. The play is intended to be acted by 3rd - 6th graders (ages 8-12).

Why should we put on this play?

The Buckie Buckle play has been shown to increase children's knowledge and use of safety belts, and also to raise awareness of car safety issues among the viewers of the play (who are usually the children's parents). So, by putting on this play you'll be educating children and their families about traffic safety.

How many main roles are there? What are they?

There are 8 main roles:

1. Buckie Buckle (main character) – has the most lines
2. Ben Buckle (Buckie's dad)
3. Bridget Buckle (Buckie's mom)
4. Grandpa
5. Grandma
6. Cousin
7. Emergency Medical Technician (EMT)
8. Narrator (adult or older child who can handle the responsibility)

There are also cue card holders (anywhere from 3-9 children)

Does it matter which kid plays which character?

Yes. Although most of the characters have three lines that are not difficult to memorize, Buckie, the EMT, and the narrator have more. Buckie has 16 lines, but they are repetitive and short. The EMT has 5 lines, and they are the hardest to memorize due to length and content. Because of this, the child playing EMT should be a strong reader and capable of memorization. The narrator has the most lines (but these can be read at a podium). The narrator should be an adult or older child who is a strong reader.

There are also a few non-memorization roles in the play. One child will be needed to "drive" the 2nd car in each scene, and this character does not speak. Also, at least 3 kids will hold up handmade cue cards saying "CRASH", "CLICK", and "I LOVE MY BUCKLE BUCKLED!" Everytime these lines are said in the play, the cue card holders will hold up the appropriate poster and shout the line.

Buckie Buckle Play: *Important Information*

What do I need to put on the Buckie Buckle play?

At a minimum, you'll need:

- Children to play the roles
- 7 kids to play the characters
- 1 narrator (adult or older kid)
- 3 kids to hold up hand-made safety cue cards at various points during the play
- 1 kid to "drive" 2nd car in each scene
- 2 cardboard (or other material) "cars" that the kids can fit into or hold up in front of them to simulate riding in a car. We worked with the art teacher to create our cars.
- Costumes for each character (see costume ideas attachment). Most of these costume elements can be purchased very inexpensively at a thrift store. Dressing up in costume makes the experience more fun for the kids!
- Cue cards (posters) with large dark block lettering: (1) CLICK, (2) CRASH, (3) I LOVE MY BUCKLE BUCKLED

Additional materials, if desired:

- Cymbals (or other instrument) to simulate the sound of cars crashing
- City landscape for the background

How long should we practice before putting on the play?

This really depends on the dedication of the kids to practice and learn their lines on their own, as well as know their movements on stage, but typically 6 practices at 30 minutes each will be enough time to master the play!

How long does the play last?

The play itself is very brief, only about 15 minutes. For this reason, it is easy to pair the play with another activity that involves the audience/family members, such as a potluck family dinner night, parent-teacher open house, or other activity showcasing children's accomplishments. It can also be performed during school at the beginning of lunch periods.

The Buckie Buckle play is an original story by Galen R. Lehman and EMT copyright 1989 by Make-a-Difference, Inc. Adapted for use with Make-it-Click project in Portsmouth, VA (Will, Dunaway, & Lorek, 2009; Eastern Virginia Medical School). Empirical support provided in: Lehman, G. R., & Geller, E. S. (1990). Participative education for children: An effective approach to increase safety belt use. *Journal of Applied Behavior Analysis*, 23, 219-225.

Buckie Buckle Character Costumes

Buckie:

- jeans/khakis
- t-shirt
- Sneakers

Ben Buckle (Dad):

- khakis/slacks
- collared, button-down shirt
- tie
- nice shoes

Bridget Buckle (Mom):

- dress or skirt and nice shirt
- dress shoes
- purse
- jewelry

Grandpa:

- slacks
- collared, button-down shirt
- jacket or sweater
- glasses
- rings
- chain
- fedora or other hat

Grandma:

- dress
- pearl or other fancy necklace
- glasses
- shawl
- dress shoes

Cousin:

- Athletic clothes
- sneakers

EMT:

- blue collared shirt
- black pants
- black shoes
- First aid kit

Buckie Buckle:

A Play For Safety

Original story by Galen R. Lehman and EMT copyright 1989 by Make-A-Difference, Inc. Adapted for use with Make-it-Click project in Portsmouth, VA (Will, Dunaway, & Lorek, 2009; Eastern Virginia Medical School).

Empirical support provided in: Lehman, G. R., & Geller, E. S. (1990). Participative education for children: An effective approach to increase safety belt use. *Journal of Applied Behavior Analysis*, 23, 219-225.

8 Roles:

1. Narrator – stands on the edge of the stage and narrates events
2. Buckie Buckle – main character; ~10 years old; casual dress (as if going to school)
3. Ben Buckle – Buckie’s dad; ~35 years old; casual dress
4. Bridget Buckle – Buckie’s mom; ~35 years old; casual dress
5. Grandpa: ~ 60 years old; dressed extravagantly, with fancy shoes, cane, sunglasses, fur, rings, chain, etc.
6. Grandma: ~ 60 years old; fancy dress, high heels
7. Cousin: ~20 years old; muscular and tall; athletic-looking; wearing athletic clothes, sneakers
8. EMT: dressed like an EMT; first aid kit

Cue card holders: A group of children who stand to the side of the stage and hold up cue cards and shout the words when prompted in the story

Key Props:

- Buckie’s family car – has to have a “back seat” for Buckie and “safety belts” – the car can be made of cardboard
 - 2nd car
 - 3 types of cue cards (posters) – CRASH!, CLICK!, I LOVE MY BUCKLE BUCKLED!
-

Script:

[TEXT IN BRACKETS PROVIDE STAGE DIRECTION]

[***NOTE: EVERY TIME “CLICK!”, “CRASH!”, OR “I LOVE MY BUCKLE BUCKLED!” APPEAR IN THE SCRIPT, ALL CHILDREN ASSIGNED TO HOLD CUE CARDS SHOULD SHOUT THE WORDS AND HOLD UP THE CORRESPONDING SIGN FOR THE AUDIENCE TO CHIME IN.]

Buckie Buckle Script

Scene 1

[THE PLAY BEGINS AS THE CURTAIN OPENS AND THE NARRATOR BEGINS READING THE STORY. PICTURED ON STAGE ARE BUCKIE AND BEN BUCKLE IN A CAR ON THE SIDE OF THE STAGE.]

Narrator: This is the story of Buckie Buckle. When Buckie Buckle was born and his/her parents brought him/her home from the hospital, Buckie's parents buckled him/her into a child safety seat and Buckie Buckle's first words were, "**I LOVE MY BUCKLE BUCKLED!**"

[CAR BEGINS MOVING TO CENTER STAGE.]

Narrator: One day, many years later, Buckie Buckle went with his/her Dad, whose name was Ben Buckle, in the car to the gas station. Buckie Buckle pulled on his/her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT "CLICK" AND HOLD UP SIGN] And Buckie said...

[BUCKIE PUTS HIS/HER BELT ON AND SAYS...]

Buckie: "**I LOVE MY BUCKLE BUCKLED!**"

[ALL CUE CARD HOLDERS SHOULD REPEAT THIS LINE WHILE HOLDING UP THE APPROPRIATE CUE CARD]

Narrator: Buckie looked over and his/her Dad didn't have his safety belt on. Buckie Buckle said,

Buckie: "Daddy, may I ask you a question?"

Dad: "Sure."

Buckie: "Why don't you have your safety belt on?"

Dad: "But Buckie, we are just going to get some gas on the next street."

[BEN AND BUCKIE GET INTO A CRASH WITH ANOTHER CAR. A FEW SECONDS AFTER THE CRASH, THE EMT WALKS UP.]

Narrator: Just then a car came around the corner and **CRASH!** [CUE CARD HOLDERS SHOUT "CRASH" AND HOLD UP SIGN] Buckie's Dad hit his nose on the steering wheel.

EMT: "Ben Buckle, don't you know that three out of four accidents happen close to home?"

Narrator: Three out of four! Buckie's dad went to the hospital and got five stitches in his nose!

[THE CRASH CLEARS, AND ALL CHARACTERS EXIT AS THE CURTAIN CLOSES. IT THEN RE-OPENS AS IF IT IS THE FOLLOWING DAY. THIS OCCURS AS THE NARRATOR BEGINS HIS/HER LINE. PICTURED ON THE STAGE ARE BUCKIE AND BRIDGET BUCKLE IN A CAR DRIVING DOWN THE ROAD.]

Scene 2

Narrator: The next day, Buckie Buckle went with his/her Mom, whose name was Bridget Buckle, in the car to the grocery store. Buckie Buckle pulled on his/her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT "CLICK" AND HOLD UP SIGN] And Buckie said...

Buckie: “I LOVE MY BUCKLE BUCKLED!”

[ALL CUE CARD HOLDERS SHOULD REPEAT THIS LINE WHILE HOLDING UP THE APPROPRIATE CUE CARD]

Narrator: Buckie looked over and his/her Mom didn’t have her safety belt on. Buckie Buckle said,

Buckie: “Mommy, may I ask you a question?”

Mom: “Sure.”

Buckie: “Why don’t you have your safety belt on?”

Mom: “But Buckie, I have been driving for ten years and never had an accident.”

[BRIDGET AND BUCKIE GET INTO A CRASH WITH ANOTHER CAR – can be same car, but should have new student driving. A FEW SECONDS AFTER THE CRASH, THE EMT WALKS UP.]

Narrator: Just then a car came around the corner and **CRASH!** [CUE CARD HOLDERS SHOUT “CRASH” AND HOLD UP SIGN] Buckie’s Mom hit her head on the windshield.

EMT: “Bridget Buckle, don’t you know that every one of us can expect to be in an accident once in every 10 years?”

Narrator: Once every ten years! Buckie’s mom went to the hospital and got six stitches in her head.

[THE CRASH CLEARS, AND ALL CHARACTERS EXIT AS THE CURTAIN CLOSES. IT THEN RE-OPENS AS IF IT IS THE FOLLOWING DAY. THIS OCCURS AS THE NARRATOR BEGINS HIS/HER LINE. PICTURED ON THE STAGE ARE BUCKIE AND GRANDPA IN A CAR DRIVING DOWN THE ROAD.]

Scene 3

Narrator: The next day, Buckie Buckle went with his/her Grandpa in the car to the bank. Buckie Buckle pulled on his/her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT “CLICK” AND HOLD UP SIGN] And Buckie said...

Buckie: “I LOVE MY BUCKLE BUCKLED!”

[ALL CUE CARD HOLDERS SHOULD REPEAT THIS LINE WHILE HOLDING UP THE APPROPRIATE CUE CARD]

Narrator: Buckie looked over and his/her grandpa didn’t have his safety belt on. Buckie said,

Buckie: “Grandpa, may I ask you a question?”

Grandpa: “Sure.”

Buckie: “Why don’t you have your safety belt on?”

Grandpa: “But Buckie, I feel safe because my car has an airbag that will protect me in a crash.”

[GRANDPA AND BUCKIE GET INTO A CRASH WITH ANOTHER CAR – can be same car, but should have new student driving. A FEW SECONDS AFTER THE CRASH, THE EMT WALKS UP.]

Narrator: Just then a car came around the corner and **CRASH!** [CUE CARD HOLDERS SHOUT “CRASH” AND HOLD UP SIGN] Buckie’s grandpa hit his head on the roof of the car.

EMT: “Grandpa, don’t you know that airbags are just meant to keep you from hitting the steering wheel and dashboard? You need to wear your safety belt to keep you from being thrown in a crash.”

Narrator: Airbags do not replace safety belts! Safety belts are important for keeping you secure in your seat. Buckie’s grandpa went to the hospital and got seven stitches in his head.

[THE CRASH CLEARS, AND ALL CHARACTERS EXIT AS THE CURTAIN CLOSSES. IT THEN RE-OPENS AS IF IT IS THE FOLLOWING DAY. THIS OCCURS AS THE NARRATOR BEGINS HIS/HER LINE. PICTURED ON THE STAGE ARE BUCKIE AND GRANDMA IN A CAR DRIVING DOWN THE ROAD.]

Scene 4

Narrator: The next day, Buckie Buckle went with his/her Grandma in the car to the shopping mall. Buckie Buckle pulled on his/her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT “CLICK” AND HOLD UP SIGN] And Buckie said...

Buckie: “I LOVE MY BUCKLE BUCKLED!”

[ALL CUE CARD HOLDERS SHOULD REPEAT THIS LINE WHILE HOLDING UP THE APPROPRIATE CUE CARD]

Narrator: Buckie looked over and his/her Grandma didn’t have her safety belt on. Buckie said,

Buckie: “Grandma, may I ask you a question?”

Grandma: “Sure.”

Buckie: “Why don’t you have your safety belt on?”

Grandma: “But Buckie, the safety belt might make my dress wrinkled.”

[GRANDMA AND BUCKIE GET INTO A CRASH WITH ANOTHER CAR – can be same car, but should have new student driving. A FEW SECONDS AFTER THE CRASH, THE EMT WALKS UP.]

Narrator: Just then a car came around the corner and **CRASH!** [CUE CARD HOLDERS SHOUT “CRASH” AND HOLD UP SIGN] Buckie’s Grandma tore her dress on the turn signal and broke her leg.

EMT: “Grandma, don’t you know that lots of dresses get torn every year when more than 200 thousand people are injured in car accidents?”

Narrator: 200 thousand people! Buckie’s grandma went to the hospital and got a cast on her leg.

[THE CRASH CLEARS, AND ALL CHARACTERS EXIT AS THE CURTAIN CLOSSES. IT THEN RE-OPENS AS IF IT IS THE FOLLOWING DAY. THIS OCCURS AS THE NARRATOR BEGINS HIS/HER LINE. PICTURED ON THE STAGE ARE BUCKIE AND COUSIN IN A CAR DRIVING DOWN THE ROAD.]

Scene 5

Narrator: The next day, Buckie Buckle went with his/her cousin in the car to a football game. Buckie Buckle pulled on his/her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT “CLICK” AND HOLD UP SIGN] And Buckie said...

Buckie: “I LOVE MY BUCKLE BUCKLED!”

[ALL CUE CARD HOLDERS SHOULD REPEAT THIS LINE WHILE HOLDING UP THE APPROPRIATE CUE CARD]

Narrator: Buckie looked over and his/her cousin didn't have his/her safety belt on. Buckie Buckle said,

Buckie: "May I ask you a question?"

Cousin: "Sure."

Buckie: "Why don't you have your safety belt on?"

Cousin: "But Buckie, my strong body will protect me so I won't get hurt if we get in a crash."

[COUSIN AND BUCKIE GET INTO A CRASH WITH ANOTHER CAR – can be same car, but should have new student driving. A FEW SECONDS AFTER THE CRASH, THE EMT WALKS UP.]

Narrator: Just then, a car came around the corner and **CRASH!** [CUE CARD HOLDERS SHOUT "CRASH" AND HOLD UP SIGN] Buckie's cousin cut his/her muscles on the broken windshield.

EMT: "Cousin, don't you know that when you are in a crash your body can weigh more than ten tons!"

Narrator: Ten Tons! Buckie's cousin went to the hospital and got nine stitches in his/her arm.

[THE CRASH CLEARS, AND ALL CHARACTERS EXIT AS THE CURTAIN CLOSES. IT THEN RE-OPENS. THIS OCCURS AS THE NARRATOR BEGINS HIS/HER LINE. PICTURED ON THE STAGE IS BUCKIE WEARING A SAFETY BELT IN A CAR DRIVING TO PICK UP ALL OF HIS/HER RELATIVES. EACH CHARACTER GETS IN THE CAR AND BUCKLES HIS/HER SAFETY BELT.]

Scene 6

Narrator: Finally, when Buckie grew up to be 16 years old, he/she got their own driver's license. One day, he/she picked up all of his/her relatives. Buckie's dad got in the car and pulled on his safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT "CLICK" AND HOLD UP SIGN] Buckie's mom got in the car and pulled on her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT "CLICK" AND HOLD UP SIGN] Buckie's grandpa got in the car and pulled on his safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT "CLICK" AND HOLD UP SIGN] Buckie's grandma got in the car and pulled on her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT "CLICK" AND HOLD UP SIGN] Buckie's cousin got in the car and pulled on his/her safety belt and made it go **CLICK!** [CUE CARD HOLDERS SHOUT "CLICK" AND HOLD UP SIGN] Buckie Buckle asked,

Buckie: "Why are you all buckling your buckles?"

All characters: "We love our buckles buckled!"

[CHILDREN HOLD UP APPROPRIATE CUE CARD]

Narrator: Make the Buckie Buckle Promise: I promise to always buckle my safety belt and say,

All children: "I LOVE MY BUCKLE BUCKLED!"

Section III

Creativity Contest

This activity encourages children to develop creative materials illustrating the theme: “How do I stay safe in a car?” Entries can be hung throughout the school to continually reinforce the program’s message, posted on social media, or promoted on your school’s website. A flyer used to promote the contest and recruit participants is included.

Creativity Contest

The contest theme is:

How do you stay safe in a car?

You can submit:

- ◆ Artwork (drawing, sculpture, etc.)
- ◆ Essay
- ◆ Poem
- ◆ Song

Remember, all submissions must relate to the theme!

Turn in entries to

by

Name

Date

Winning submissions will be displayed in the
building!

Section IV

Classroom Activities

Several homework assignments are provided. Each is packaged with teacher lesson notes and tips for how the assignment can fulfill state standards of learning for various subjects.

Teacher Instructions for

“Be the Buckle Boss!”

Instructions

- ◆ Instruct students to answer each question each time they get into the car. Every car ride should be recorded on a new “Buckle Boss” form.
- ◆ Explain that “**Step 1**” answers two questions based on their own observations of the people riding in the car with them.
- ◆ Explain that “**Step 2**” is more like checking off a “To Do” list.
- ◆ Let students know when all “Buckle Boss” forms are due.
- ◆ Remind students a couple of days in advance when project is due.

Standards of Learning

- ◆ To make compliant with standards of learning for Math:
 - ◇ Total # of people wearing belts and not wearing belts.
 - ◇ Total # of kids sitting in the back seat and not sitting in the back seat.
 - ◇ Compare each total using ratios
 - ◇ Make graphs of the data collected and study/interpret them.
 - ◇ Find the likelihood (or percentages) of wearing belts and sitting in the back.

Be the Buckle Boss!

Step 1: LOOK

While you're in the car, look at the following things:

Is everyone wearing a safety belt/using a booster seat?

☐ Yes

☐ No

Are all the kids in the backseat?

☐ Yes

☐ No

Step 2: TELL

Now tell your family how they did:

- ☐ Tell your family why it's important to wear their safety belts/use booster seats.
- ☐ Tell the kids why it's important to ride in the backseat.

Teacher Instructions for

“Safety Scavenger Hunt”

Enclosed you will find a pack of Safety Scavenger Hunt homework assignments to give to each one of your students as part of the Make-it-Click Program. The purpose of this assignment is to get the kids into the safety mind-set. Below are instructions to help you guide the students in their safety pursuit. We’ve also provided tips for how to make this assignment compliant with standards of learning. We appreciate you participating in the effort to keep our children safe.

- ◆ Instruct students to find as many pictures of the objects. The pictures can be from magazines, newspapers, the internet, etc. The students can even take the pictures and print them themselves.
- ◆ Pictures should be glued/taped onto paper or otherwise clipped together.
- ◆ Remind students that the point of this is to get them thinking about car safety.

Standards of Learning

- ◆ To expand the fun and make this assignment compliant with **standards of learning for Math**, you might consider:
 - ◇ Have students work in groups to sum up each type of picture brought in, and/or
 - ◇ Create ratios using the sums created e.g.) total # kids wearing seatbelts
 - ◇ total # of all kids pictured in cars e.g.) total # of stop signs
 - ◇ total # of all street signs
- ◆ To make this assignment compliant with **standards of learning for English**, you might consider:
 - ◇ Have students arrange pictures in a sequence to tell a story, and/or
 - ◇ Have students plan and present an oral presentation related to their Scavenger Hunt findings

WANTED

Safety Scavenger Hunters

MISSION

Find as many pictures of the objects on the list

Teacher Instructions for

“Seat Belt Scramble”

This SOL-friendly activity will teach your students the valuable lesson of wearing one’s safety belt in a car. This could be an individual assignment (in class or take home), or you can have students work in groups. To encourage creativity, consider having students decorate their “cars” (boxes) before beginning.

Remember to discuss the following key facts with the students:

- ◆ Car crashes are a leading cause of death for children.
- ◆ Seatbelts prevent ejection from the car during a crash. You are 4 times more likely to be killed if you are thrown from the vehicle.
- ◆ Wearing a seatbelt cuts the risk of injury in a collision by half and is the single most important thing a person can do to keep themselves safe while riding in a vehicle.
- ◆ You can also illustrate the dynamics of movement when in a traveling vehicle: Explain that when the “car” is traveling at 35 MPH, so is the egg. If the “car” stops suddenly, the egg continues to travel at 35 MPH if not “buckled” in.

Standards of Learning

This assignment can easily satisfy Standards of Learning (SOL) objectives. Here are some suggestions:

- ◆ To make this compliant with **English SOLs**,
 - ◇ consider having the students expand on their short answer questions by writing a full essay
- ◆ To make this compliant with **Science SOLs**,
 - ◇ consider elaborating upon concepts such as crash forces and forward motion. Sir Isaac Newton’s theory of motion states that “An object in motion continues to remain in motion at the original speed until acted upon by an outside force.”
 - ◇ discuss with students the advantages of being stopped by the safety belt (which is meant to stretch slightly) versus the windshield/pavement/hard ground.
- ◆ To make this compliant with **Math SOLs**,
 - ◇ consider varying the angle of the string to the floor to see what happens with the unbelted egg when the “car” is traveling on string that is positioned at various decline angles.

Seat Belt Scramble

Materials Needed:

- Shoe boxes (1 for each person or group)
- Eggs (2 per person or group)
- Ball of twine (string) cut into 8 feet pieces
- Tape (masking, packing, or other heavy-duty tape)
- Plastic bag, newspaper, or other item to cover floor for easy clean-up

Instructions for student exercise (to complete individually or in groups):

1. Cut a small hole in each end of the shoe box (about in the middle). Thread the piece of string through each hole so that the string is running through the inside of the box (see diagram).
2. Place egg into shoe box; gently tape it down into the shoe box.
3. Tape one end of the string to the floor and the other end to a wall, so that the string makes a steep decent (downward slope should make an angle about 30 degrees out from the wall).
4. Put plastic bag/floor covering around the string.
5. Hold box with egg at the top of string (near wall), let go of box.
6. Using the same box, place the 2nd egg in the box without taping it.
7. Hold box with the un-restrained egg at the top of the string, let go.

Discussion Ideas

- After the **first run**, discuss the outcome with students.
- Did the egg break? Why not? If egg cracks during this run, discuss the fact that although the egg was “injured”, it would have been worse unbelted. What did the students learn from this assignment?
- After the **second run**, discuss with students what happened to the egg.
- Why did the egg break? Discuss the fact that seat belts keep people from being ejected during a crash.
- Would a similar outcome happen if unrestrained during a car crash?

Teacher Instructions for

“Bodies in Motion!”

In this assignment, students will calculate the amount of force (in pounds) it would take to restrain an occupant in the event of a car crash. Enclosed you will find the “Bodies in Motion!” worksheet. Below are the instructions to help you guide the students in thinking about proper vehicle safety.

Give students background information about crash forces and Newton’s law to help them complete this assignment:

- ♦ **Newton’s Law of Motion** states that an object in motion keeps moving in the direction and speed it was traveling in unless it is stopped by something.
- ♦ In the case of a vehicle, this could mean the brakes, another vehicle, or a tree/pole.
- ♦ In the case of the occupants in that vehicle, this could mean the windshield, seat belt, or anything else inside or outside the vehicle. If the vehicle is traveling at 35 mph, occupants will continue traveling at 35 mph once the vehicle crashes, unless they are belted in and thus, stop with the vehicle.

Types of Collisions

There are three collisions during a car crash

- ♦ **Vehicle collision:** vehicle begins to stop when it collides with another vehicle, object, etc.
- ♦ **Human collision:** Occupants in the vehicle continue to move forward in the same speed until they collide with something inside the vehicle.
- ♦ **Internal collision:** The occupant’s internal organs continue to move forward in the same speed until they collide with other organs, bones, etc.

Bodies In Motion: *Examples*

To illustrate the power of crash forces, you might use the following example:

A car going 40 mph would hit a tree with the same force as hitting the ground after falling off of a 50 foot cliff. An unrestrained person in that car would go through the windshield with the same force as hitting the ground after a fall from a 5-story building.

Crash forces can be approximated using the following **formula**:

Crash Forces Equation

person's weight	x	speed of vehicle	=	pounds of force needed to keep the occupant in his/her seat
-----------------	---	------------------	---	---

The student exercises can be solved using this **crash forces equation**. Go over this equation with your students, and consider using some of the following examples:

- If an average man weighing 180 pounds crashes his car into another vehicle going 50 MPH, the force needed for the seat belt to keep him in the car would be 9,000 pounds. This roughly equals to the weight of an adult African Elephant! Without the seatbelt, the man will propel forward with the force of an elephant.*
- If a 90 pound child is properly restrained with a seat belt in a car that crashes when going 30 MPH, the restraining force provided by the seat belt in a crash is 2,700 pounds. This roughly equals to the weight of a small car! Without the seat belt, the child will propel forward with the force of the weight of a small car.*

Remind students of the importance of wearing a seat belt while riding in a vehicle, especially when involved in a car crash.

Emphasize the following points:

- ♦ Car crashes are a leading cause of death for children.
- ♦ Seat belts prevent ejection from the vehicle. You are 4 times more likely to be killed if you are thrown from the vehicle during a crash.
- ♦ Wearing a seatbelt cuts the risk of injury in a collision by half.
- ♦ Wearing a seatbelt is the single most important thing a child can do to keep themselves safe while riding in a vehicle.

This assignment can be used to fulfill **math or science SOL objectives** (for 5th or 6th grade). To expand the fun, ask the students to think of objects that weigh as much as the answers.

Answer Key:

1a) Abby = 3,600 lbs

2a) Ryan = 2,750 lbs

3a) Amanda = 4,350 lbs

1b) Abby's mom = 5,400 lbs

2b) Matthew = 3,500 lbs

3b) Amanda's baby = 300 lbs

Bodies in Motion

Instructions:

Read each word problem carefully, and complete the questions. Show all of your work on the back of this sheet or a separate sheet of paper. Use the following equation to help you.

1

Abby and her mom are driving to the mall. They are both wearing safety belts and they are traveling at 45 MPH. Abby weighs 80 pounds, and her mom weighs 120 pounds.

What are the pounds of force Abby's seat belt will need to provide to keep Abby in her seat during a crash? What are the pounds of force the seat belt will need to provide to keep Abby's mom in her seat during a crash?

Abby:

Abby's Mom:

2

Ryan is riding in a car with his older brother Matthew when they are involved in a car crash. Neither Ryan nor Matthew was seriously hurt during the crash because they were both properly restrained by their seat belts. They were traveling down the road going 25 MPH when they collided with another car. Ryan weighs 110 pounds and Matthew weighs 140 pounds.

Calculate pounds of force that were needed to keep both Ryan and Matthew in their seats.

Ryan:

Matthew:

3

Amanda is taking her baby to her friend's house for a visit. Both Amanda and her baby are practicing good car safety and are restrained properly in their seats (using a seat belt and car seat, respectfully). On the way, Amanda's car is struck by another car on the road. Amanda weighs 145 pounds, and her baby weighs 10 pounds.

Calculate the pounds of force necessary to keep both Amanda and her baby safe in their seats during the crash, when they were driving 30 MPH.

Amanda:

Amanda's Baby:

Teacher Instructions for

“Click-Together-Sentences”

The purpose of this assignment is to encourage the students to think more about car safety while learning how to construct compound sentences. Below are instructions to help you guide the students in completing the assignment. We appreciate you participating in the effort to keep children safe.

Instructions

Explain to the students that the simple sentences can be combined into one (often longer) compound sentence that conveys the same information. They may need to use punctuation (such as commas) and/or conjunction words (such as “and,” “because,” “when,” and others).

Remember to discuss the following **key facts** with the students:

- ♦ Car crashes are a leading cause of death for children.
- ♦ Seat belts and other restraints prevent ejection from the car during a crash. You are 4 times more likely to be killed if you are thrown from the vehicle.
- ♦ Wearing a seat belt cuts the risk of injury in a collision by half and is the single most important thing a person can do to keep themselves safe while riding in a vehicle.
- ♦ For this age group, sitting in the back seat reduces mortality risk by almost half.

Sample Answers for the Activity

There are many right ways to combine the sentences for each item. We’ve provided an example answer for each below, but students may choose to combine them in other ways.

- ♦ Quentin always wears his seat belt when he rides in the car.
- ♦ Jamal is safe because he always wears his seat belt.
- ♦ Kyras’s grandma will not let her sit in the front seat because it is safer for her to sit in the back seat.
- ♦ Miguel wears his seat belt when he rides in his mother’s blue car.
- ♦ Juan’s little sister, Maria, uses a car seat.
- ♦ Amy always wears her seat belt and sits in the back seat when she goes on a trip.
- ♦ Amanda eats a vanilla sundae in the back seat of the car on the way home from the ice cream shop.

Click-Together Sentences

Instructions:

“Click” the simple sentences together into one compound sentence that provides the same information as the simple sentences. You may need to use punctuation (such as commas) and/or conjunction words (such as “and,” “because,” or “when”).

1	a) Quentin rides in the car.	b) Quentin always wears his seat belt.	
	Answer:		
2	a) Jamal is safe.	b) Jamal always wears his seat belt.	
	Answer:		
3	a) It is safer to sit in the back seat.	b) Kyrah’s grandma will not let her sit in the front seat.	
	Answer:		
4	a) Miguel wears his seat belt.	b) Miguel rides in his mother’s car.	c) Miguel’s mother’s car is blue.
	Answer:		
5	a) Juan has a little sister.	b) Juan’s little sister uses a car seat.	c) Juan’s sister’s name is Maria.
	Answer:		
6	a) Amy goes on a trip.	b) Amy sits in the back seat.	c) Amy always wears her seat belt.
	Answer:		
7	a) Amanda eats a vanilla sundae.	b) Amanda sits in the back seat of the car.	c) Amanda is on her way home from the ice cream shop.
	Answer:		

Teacher Instructions for

“Ultimate Back Seat Blueprint!”

For children under the age of 13, the back seat is the safest place to ride in the car. Though many children are given the option to sit in the front seat prior to age 13, it is unsafe for a number of reasons.

First, airbags are often not designed to account for smaller passengers and may deploy with too much force and cause injury or even death.

Second and more importantly, most crashes are frontal, meaning kids in the back are farther from the point of impact. This protection is especially important for the fragile bodies of children under 13 years old.

One way to encourage pre-teens to sit in the back seat is to teach them the benefits and allow them to create their own space. This activity is an opportunity for students to think about how they would redesign the back seat of their family’s car if they could add their own style and have everything they need at their fingertips.

Teach students about the **advantages** of sitting in the back seat:

- ♦ Car crashes are a leading cause of death for children. The two most important things children can do to stay safe are to use the proper safety restraint and sit in the back seat.
- ♦ For this age group, sitting buckled in the back seat reduces mortality risk by almost half.
- ♦ Most crashes are frontal, so sitting in the back seat moves children farther away from the point of impact.
- ♦ Airbags can seriously injure or kill smaller children who are seated in the front seat.

Instructions

On the attached sheet or any kind of poster paper, ask students to draw what they consider is the perfect back seat. What are the kinds of things they would want within reach of them? For instance, they might want coloring books/crayons, stickers, etc. How would they redecorate the seat? Encourage the students to be creative!

You can make this activity extra exciting by staging a friendly contest among students and perhaps giving away small prizes/ribbons. One suggestion is to post their work around the room/school, and have the students vote on the most creative back seat.

Standards of Learning

To make this assignment compliant with **English SOLs**, you might accompany this assignment with an essay question and have the students complete oral presentations.

To make this assignment compliant with **Math SOLs**, ask students to categorize and tally similar themes in students’ pictures. Then, ask them to calculate proportions and/or graph the results.

Ultimate Back Seat Blueprint

How would you re-design the back seat of your family's car if you could add your own style and have everything you need at your fingertips? Draw your perfect back seat!

Teacher Instructions for

“Vehicle Safety Data”

This assignment will involve the students in an observation exercise that can fulfill math and science standards of learning objectives; plus, students will learn about the importance of buckling up for safety. Enclosed you will find a Vehicle Safety Data Sheet for your students. Students will observe people driving or riding in cars, and indicate on the attached sheets if drivers and passengers are using their seat belts.

Instructions

- Students to observe cars that they see driving slowly in familiar places. Ideas include parking lots of shopping centers/malls, schools, churches, etc.
- students to stand a safe distance from traffic on sidewalks or grassy areas, away from the street or intersections.
- Be sure to emphasize student safety.
- Students are to be accompanied by an adult when collecting data, and to always stand on sidewalks at an entrance, and to never collect data in the street, at dusk or at night.

Remind them that they should **NEVER** observe from medians in the middle of the street.

On the attached sheet, students are to record the safety belt/booster use and back seat use of people in passing vehicles. They are to use one line per vehicle, and record yes or no for

- (a) whether the driver is wearing a safety belt,
- (b) whether all passengers are wearing safety belts/restraints, and
- (c) whether all children are in the back seat.

Tell students that if they are unsure of what they saw or couldn't see at all, they should not record the information on the sheet. Remember to convey to students some **key facts** about wearing a safety belt and sitting in the back seat:

- ◆ Car crashes are a leading cause of death for children.
- ◆ For this age group, sitting in the back seat reduces mortality risk by almost half.
- ◆ Most crashes are frontal, so sitting in the back seat moves children farther away from the point of impact.
- ◆ Seatbelts prevent ejection from the car during a crash. You are 4 times more likely to be killed if you are thrown from the vehicle during a crash.
- ◆ Wearing a seatbelt cuts the risk of injury in a collision by half and is the single most important thing a child can do to keep themselves safe while riding in a vehicle.

“Vehicle Safety Data”

Standards of Learning

Here are some suggestions to make this assignment easily satisfy Standards of Learning (SOL) objectives.

To make this assignment compliant with **Math SOLs**:

- Ask students to sum up the total of Yes responses and No responses by column.
- Create ratios using sums for each column (Examples):
 - ◊ **Driver seat belt use:** Total number of drivers wearing seatbelts [i.e., Yes in driver column] Total number of drivers observed [i.e., Yes + No in driver column]
 - ◊ **Passenger seat belt use:** Total number of cars observed with all passengers wearing belts [i.e., Yes in passenger column] Total number of cars observed with passengers [i.e., Yes + No in passenger column]
 - ◊ **Children observed in the back:** Total number of cars observed with kids in the back seat [i.e., Yes in kids in back column] Total number of cars observed with kids [i.e., Yes + No in kids in back column]

To make this assignment compliant with **Science SOLs**:

- Ask the students to create graphs of the data collected and study/interpret them.
- Beforehand, have the students make predictions about what they might observe. After they collect the data, ask them to make inferences about the data, and draw conclusions about what they found.

To make this assignment compliant with **English SOLs**:

- The students could write an essay about what they found, and whether the people they observed were traveling safely. Students could also present their findings orally to the class.

Vehicle Safety Data Sheet

Circle Yes/No for safety belt use/booster seat use you observe in passing vehicles. Use a separate line for each vehicle.

Your Name:	
Today's Date:	
Time:	
Location:	

	Is the driver wearing a safety belt?		Are all the other people in the car wearing a safety belt? (Leave blank if no passengers)		If they are all kids, are they all in the back seat? (Leave blank if no kids)

Parent Flyers/Posters

This series of flyers/posters targeting parents was developed based on feedback garnered from tween focus groups. Each of the flyers communicates (quickly) a method or reason for encouraging tweens to sit in the back seat and buckle up. Several of the parent flyers are available depicting White, Black, and Hispanic individuals. Posters are also available in Spanish on www.carsafetynow.org.

Compromise and keep them buckled in the back!

Since most crashes are frontal, the safest place for kids under age 13 is in the back seat. Wearing a seatbelt AND sitting in the back seat greatly reduces injury. To keep kids happy in the back seat, let them choose the station and point the A/C vents in their direction.

Compromise and keep them buckled in the back!

Airbags Do Not Replace Seat Belts

The seat belt and airbag work together to keep you safe. Without your seat belt, the airbag cannot protect you.

For kids under 13, the safest place to ride is in the back seat.

Hold onto the one you love

– with a seat belt.

Five Ways to Get Your Tween Safely Buckled Up in a Back Seat:

Most parents agree it's the right thing to do: Every child should wear his or her seat belt, and, if they are under 13, the child should sit in a back seat. The challenge is making it happen. But guess what?

You may have more influence than you think. When 8- to 13-year-olds were asked in a recent survey what might get them to wear a seat belt, most cited their own parents. What's more, tweens mimic their parents when it comes to belts: If parents buckle up, so do their children. How can you get your child buckled safely in back? Check out these five ideas:

1 Let them pick the radio stations.

Eight to 12-year-olds, like tweens everywhere, are eager to make their own choices, and picking a radio station is often high on their list. Make a deal with your child: If the child sits buckled in back, he or she can pick the radio stations. Otherwise, it's my old-fogey music or the radio news.

2 Give them something to do.

A back seat can be a great place for playing electronic games. Store games in a back seat and make games in the front seat off limits.

3 Let them own the space.

Tweens are eager to claim their own space. Let them set up places to keep things in a back seat so that's the first place they want to go.

4 Buckle up.

Tweens do what you do — if you buckle up, they are more likely to do the same.

5 Tell them it's the law.

Seat belts are mandatory by law. Let tweens know belt use isn't an option; it's the law.

Q: Which of these kids needs a booster seat?

A: Both!

If you answer “no” to any of these questions, your child is NOT ready to come out of his or her booster seat:

1. When sitting all the way back in the vehicle seat do the child's knees bend comfortably at the edge of the seat and feet rest flat on the floor?
2. Does the shoulder belt cross the center of the chest and rest on the shoulder, not the neck?
3. Does the lap belt fit low on the hips touching the upper thighs, not the stomach?

BOOST 'EM
IN THE BACK SEAT!

Section VII

Educational Presentation

This ready-made educational presentation targets adults and can be used to inform school, community, and parent groups about keeping children ages 8-12 safe in the car.

What you should know about keeping 8-12 year old “Tweens” safe in the car

Why is Tween Safety Important?

- Motor vehicle crashes are a leading cause of death for children
 - Many children are unrestrained or restrained improperly, which greatly increases their chances of injury
- Tweens (8-12 years old) are at higher risk for crash injury.
 - As children age, their crash injury rate rises
 - Can be attributed to lower restraint use among older children
- Tweens are at an important age for intervention
 - Time of transition and developing life-long habits
 - Highly impressionable to peer AND parent influence

What is the Issue?

- Less than half of tweens (8-12 years old) involved in crashes wear safety belts
 - Proper restraint use reduces risk of dying in a crash by 45%-60%, depending on the type of vehicle
- Nearly three-fourths of tweens sit in the front seat when they are sole passengers in the vehicle
 - Rear seating until age 13 reduces risk of dying in a crash by 40%

What Do You Need to Know?

- The 2 most important things tweens can do to protect themselves in a crash are to use the proper safety restraint (safety belt or booster seat) and sit in the back seat.
- People are 4x more likely to be killed if thrown from the vehicle. Safety restraints prevent being thrown from the vehicle and spread crash forces over the strongest parts of the body.
- Most crashes are frontal, so rear seating moves children farther from the point of impact and away from airbags that are not safe for smaller passengers. Rear seating cuts mortality risk in half.

Many Tweens May Still Need a Booster Seat

- When children are too small for a seat belt, the seat belt can cause injuries in a crash.
- Many adults are surprised to learn that it can take up to 12 years for a child to be big enough for safety belts – close to 5 feet tall and between 80 and 100 pounds
- Is your child ready for a safety belt? If you answer “no” to any of these questions, your child is not ready to transition out of the booster seat:
 - Does the child sit all the way in the back seat?
 - Do the child’s knees bend comfortably at the edge of the auto seat?
 - Does the shoulder belt cross the chest at the shoulder, not the neck?
 - Does the lap belt fit low and snug on the hip bones, touching the upper thighs?
 - Can the child stay seated like this for the whole trip?

What Should You Do?

- Parents should tell their children to sit in the back seat, and to buckle up
- Require use of a booster seat until the belt fits properly
- Tell them why its important for every ride, every time (no exceptions)!
- To help keep them happy in the back seat, let them pick the radio station, and point the A/C vents in their direction.
- Practice buckling up yourself (children may not **hear** what you say, but they will **do** what you do!)

Thank You!

Make it Click

60-seconds

<Billy, 10 year-old child>

Why are you wearing a seat belt?

<Sarah, 10 year-old child>

I *always* buckle my seat belt... every time I ride in the car

<Billy>

Every time? We're just going down the street to the store?

<Sarah>

Yeah silly! It's *more* dangerous when you're closer to home, right mom?

<Sarah's Mother, From front seat>

That's right, three out of every four car crashes happen close to home. That's why it's important to *always* wear your seatbelt... no matter how far you're going.

<Billy>

I guess I should wear mine too then... Is that why you always sit in the back seat Sarah?

<Sarah>

Uh huh... because sitting in the back seat is safer if we get in an accident.

<Sarah's Mother>

Yep. Since most car crashes happen from the front, anyone under 13 is a lot safer sitting in the back seat.

Section IX

Effectiveness of Program

Read about the remarkable effects of the Make-it-Click program, which was evaluated in four elementary schools in an urban school district in southeastern Virginia. This overview summarizes the evaluation study, which found significant increases in safety belt use at intervention schools. Students in intervention schools were 3.3 times more likely to wear their safety belts at follow-up compared to those in control schools, despite no difference among the schools at baseline.

MAKE-IT-CLICK PROGRAM

NEARLY DOUBLES SAFETY BELT USE RATE IN TWO VIRGINIA ELEMENTARY SCHOOLS

Why we care about the safety behaviors of tweens

Motor vehicle crashes are a leading cause of death for children. Unfortunately, few vehicle safety programs specifically target 8-12 year olds (tweens). Tweens are at a time of transition, and are just starting to make their own decisions and develop safety habits. Nearly half of the tweens killed in car crashes every year in the US are completely unrestrained, and 50 to 75% of tweens sit in the front seat when they are the sole passengers in the vehicle. These factors increase risk of serious injury or death in a car crash by 45-55%.

The Make-it-Click Program

The purpose of the Make-it-Click program was to develop, implement, and evaluate a participative education program targeting increased restraint use and back-seat use among 8-12 year-old children (tweens) in 4 Virginia elementary schools (2 intervention and 2 control). Funded by the Virginia Highway Safety Office and led by Dr. Kelli England of Eastern Virginia Medical School, the program's design included involvement of teachers, school staff, and after school organizations (primarily Boys and Girls Clubs of America) to implement components in ways that would not infringe upon academic time in the school setting. The program's interventions were implemented on a rolling basis (1-2 per month) and included the creativity contest, Buckie buckle play, belted in the back seat challenge, safety-themed assignments, parent education flyers, and teacher newsletters.

Parking lot observations were conducted at the beginning (in September) of the school year at all four schools. Following these observations, the intervention program was implemented in stages throughout the school year at the intervention schools. Post-intervention parking lot observations were conducted at all four schools at the end of the school year (in May) and follow-up observations were conducted after summer break, in September of the following school year. Parking lot observations of tweens' safety belt and back seat use occurred twice per school per phase during drop-off times.

What we found

At baseline (pre-intervention), tweens at intervention and control schools had very low seat belt use rates: 31.9% for intervention schools and 37.8% for control schools. After the Make-it-Click program took place in the intervention schools, observations were conducted again. This time, tweens' seat belt use at the intervention schools had increased to 56.2%. However, seat belt use at the control schools had also increased to 60.4%, which was unexpected. We realized that our observations coincided with the 1-month national Click it or Ticket (media + enforcement) campaign, which explained the increase at the control schools. So we decided to conduct observations again after the Click it or Ticket campaign ended.

Follow-up Observations

At the follow-up observations, we found that seat belt use at the control schools had dropped back to its original level: 38.8%. However, tweens' seat belt use at the intervention schools maintained at a significantly higher level than at baseline: 67.9%. This means that **the Make-it-Click program was successful at increasing and maintaining seat belt use among tweens!** In fact, it shows that **tweens at the intervention schools were 3.3 times more likely to wear their safety belts than tweens at the control schools.** Unfortunately, rates of backseat use did not significantly differ between tweens in the intervention and control groups at any phase of the study (overall mean back seat use = 39.6%).
